(54) Title: CLOSURE ARRANGEMENT

(57) Abstract: The invention discloses a closure arrangement (20) including a locating member (24) being adapted to be joined to a neck of a container. A dispensing body (22) encloses the locating member (24) and is uni-directionally rotatably joined thereto. The locating member (24) has an internal thread (52) and the dispensing body (22) is nonrotatable about the locating member (24) in a direction required to screw the locating member (24) onto a neck of a container, while the dispensing body (22) is freely rotatable about the locating member (24) in a direction required to screw the locating member (24) off a neck of a container, thereby preventing removal of the locating member (24) from the container. The dispensing body (22) includes a spigot (26) movably joined to the body (22), and a control member (28) movably associated with the spigot (26). The body (22) defines a centrally located cylindrical bore (30) across which a first passage (32) extends traversing the bore (30) along its diameter. The first passage (32) has an inlet (34) and an outlet (36).
